Low risk areas such as
desktops, windows,
hallways and reception

GREEN

Green - Food Prep

Kitchen, food preparation
or service

RED

Bathrooms

High risk sanitary areas
such as toilet bowls,
urinals and toilet floors

Yellow

Infectious Control

Breakout of Infectious
disease or vomiting

A colour coding system which includes cleaning products and equipment (cloths, mop head, handles and buckets etc) is the most widely accepted practice for preventing cross contamination. Always begin cleaning at the cleanest point and work towards the dirtiest. Cleaning Equipment should be cleaned thoroughly after each use and mop heads replaced frequently.
